

# 524 Remote Keypad - User Guide

## Introduction

The 524 Remote Keypad is designed to work with the 500r+ or 690r wirefree alarm system control units. The keypad allows you to set and unset the alarm system, and if necessary activate a PA (panic alarm).

You can program the keypad to use an access code from three to eight digits long. This access code can be different from the access code you use at the alarm system control unit.

Figure 1 below shows the main features of the keypad.

Figure 1.

## Changing the User Code

You can store a single access code on the keypad. The access code can have between three and eight digits, and does not have to be the same as the access code for the alarm system control unit. Do not use "0" as the first digit of the keypad access code. To store your access code:

1. Press ..  
The red LED glows.
2. Key in the current access code. (The default access code is "1234".)
3. Press ..
4. Key in the new access code. (Minimum three digits, eight digits maximum.)

5. Press .
6. Key in the new access code again.
7. Press .

The keypad beeps twice and flashes the red LED to indicate that it has accepted the new code. If the keypad gives a low error tone then it has not accepted the new code, and not changed the current code. Repeat steps 1 to 7.

## **Setting, Part Setting and Unsetting**

### **To Set your Alarm System**

Key in the Access code and press .
